EGG FREEZING UPDATE

Largest Egg Freezing Study Now Predicts the Probability of Having Children

New research is giving women a better idea of how likely they are to conceive one, two, or three children based on the number of eggs they have frozen and their age at the time of freeze.

Shady Grove Fertility physicians recently published the largest data findings of its kind in the U.S. showing the success rates associated with egg freezing. As a result, physicians can answer patient questions with even greater confidence.

IN WOMEN <38
70-80%
WILL TAKE
HOME A BABY

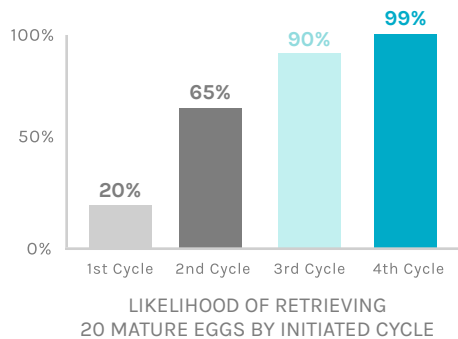

How many eggs are needed for pregnancy? WOMEN <38 SHOULD AIM FOR 15 TO 20 MATURE EGGS

For many women, especially those under the age of 38, 15 to 20 mature eggs remains the appropriate goal for total eggs to freeze. The number of cycles needed to obtain 15 to 20 mature eggs depends on the patient's age and ovarian reserve status. To increase the chance of taking home a baby in women over the age of 37, the ideal number of mature eggs to freeze is 25 to 30.

How many cycles are needed? ASSURE 20 AND ASSURE 30

Our exclusive Assure programs offer women the security of knowing they will be able to obtain their desired number of eggs, based on their age, for a fixed fee. Women who achieve their intended number of eggs in the first cycle can receive a partial refund while those who require additional cycles will not incur any extra cycle expenses.

Assure 20: 20 Eggs or 4 Cycles
Assure 30: 25-30 Eggs or 5 Cycles

When is an egg freezing evaluation indicated? WHO AND WHEN TO REFER TO SHADY GROVE FERTILITY

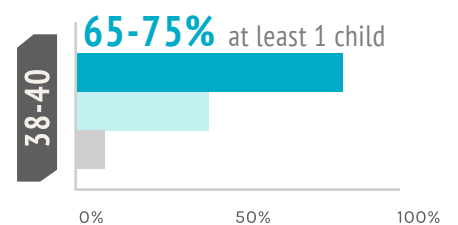

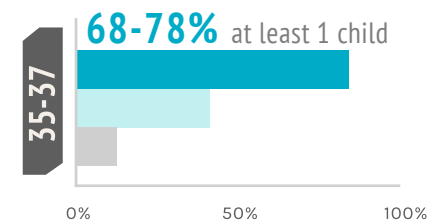

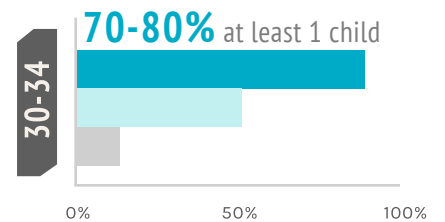

Anyone interested in egg freezing should be referred to Shady Grove Fertility for testing and consultation. Other ideal candidates for a referral include women:

- Ages 30 to 40 not considering conception in the near future (women in their early- to mid-30s have the highest chance of success)
- Recent cancer diagnosis
- History of endometriosis or dermoids
- Family history of premature ovarian failure or early menopause

Predicted Probability of Having Children Using Frozen Eggs Based on Maternal Age at Time of Egg Freeze

BASED ON 15 TO 20 EGGS FOR WOMEN ≤37 AND 25 TO 30 EGGS FOR WOMEN 38 TO 40

1 child 2 children 3 children
